

Service Outage

What to do when services stop working — explained simply for customers

1. Complete Voice & Data Down

What this means: You cannot make or receive any calls and mobile internet has completely stopped.

Step 1: Do not panic — this is usually a temporary outage in your area affecting many customers at once.

Step 2: Restart your phone once to rule out a device issue.

Step 3: Check our app or website under 'Service Status' to see if your area is affected.

Step 4: If your area is listed as affected, no action is needed from you — our team is already working on it.

Step 5: Use a Wi-Fi connection at home or office for messaging apps like WhatsApp while waiting.

Step 6: Do not keep restarting your phone repeatedly — it will not fix a network outage.

Step 7: Raise a ticket if your area is NOT listed as affected — your issue may be a local one that needs separate attention.

■■ Complete outages are rare and our team works around the clock to restore service. Average restoration time: 2–4 hours.

2. Partial Service Not Working

What this means: Some services work but others do not — for example, you can make calls but internet is down, or SMS works but calls do not.

Step 1: Identify exactly which service is not working — calls, SMS, or internet.

Step 2: Restart your phone.

Step 3: For internet only: switch mobile data OFF and ON. Check data balance.

Step 4: For calls only: check that Do Not Disturb mode is not turned on accidentally.

Step 5: For SMS only: check that your message centre number is correct — call us and we will guide you.

Step 6: Check our app for partial outage notices in your area.

Step 7: If only one service is down for more than 3 hours, raise a ticket specifying which service.

■■ Partial issues are often resolved remotely by our team without needing a technician visit.

3. Core Network Failure (Large Area Affected)

What this means: A major outage affecting a large number of customers across a city or region.

Step 1: Check our official app, website, or social media pages for an outage announcement.

- Step 2: You will receive an SMS from us once we detect a widespread issue.
- Step 3: Keep your phone connected to Wi-Fi if available.
- Step 4: For urgent needs, use WhatsApp or internet-based calling apps over Wi-Fi.
- Step 5: Do not raise multiple tickets for the same issue — one ticket is enough.
- Step 6: Service will be restored automatically — your phone will reconnect on its own.
- Step 7: After service is restored, if your phone does not reconnect within 10 minutes, restart it once.

■ ■ We will proactively send you an SMS with updates during a major outage. You do not need to keep calling — we are on it.

4. Voice Calls Not Working Clearly (VoLTE Issue)

What this means: Voice over LTE (VoLTE) is what makes HD voice calls possible on 4G. If it fails, calls may sound robotic, echo, or drop frequently.

- Step 1: Restart your phone.
- Step 2: Check that VoLTE is enabled: Settings → Mobile Network → Enable VoLTE or HD Calls → turn it ON.
- Step 3: Make sure your phone supports VoLTE (most phones made after 2017 do).
- Step 4: Switch network mode to 3G temporarily, make a call, then switch back to 4G/5G.
- Step 5: If call quality is poor consistently, raise a ticket — our team can check if VoLTE is properly set up on your account.

■ ■ VoLTE issues are usually fixed by our team remotely within a few hours after a ticket is raised.

5. Planned Maintenance — Service Interruption

What this means: We occasionally carry out scheduled upgrades that may temporarily affect your service. We always inform you in advance.

- Step 1: Check if you received an SMS about planned maintenance in your area.
- Step 2: Note the maintenance window time mentioned in the SMS — service will be restored after that.
- Step 3: Plan important calls or work before the maintenance window begins.
- Step 4: Do not raise a ticket during the maintenance window — it is a known and planned event.
- Step 5: If service does not restore within 30 minutes after the maintenance window ends, raise a ticket.

Quick Reference — Outage Types

Outage Type	Affects	Expected Fix Time	What You Should Do
-------------	---------	-------------------	--------------------

Complete outage	All services	2–6 hours	Wait, use Wi-Fi
Partial outage	One service	1–3 hours	Raise ticket
Core network failure	Large area	4–8 hours	Check app for updates
VoLTE issue	Call quality	1–4 hours	Raise ticket
Planned maintenance	Specific area	As per SMS	Wait for window to end
